Natural Colour Variation

Please be aware that Besser® Blocks are made from natural materials and as such colour variation does occur. These variations can be caused by such things as raw material colour, moisture, plant location, length of time a product has been stored, etc.

With this in mind Adbri Masonry do not guarantee that all products will be the same colour or shade. If you require "face" block-work please talk to your sales representative before placing your order so we can endeavour to colour match, or make the product specifically for your project needs.

Architectural Coloured Masonry

The following blocks are available in value added architectural texture finishes.

* Minimum quantities and lead times apply for all orders of Architectural Block.

* Please see Architectural Masonry South Queensland Brochure for available colours and important information about Adbri's Architectural Masonry Products.

MORTAR AND GROUT INFORMATION

The Three Principal Functions of Mortar are

1. To provide an even bedding for the blocks and allow level courses by taking up small variations in unit height.
2. To transmit compressive loads
3. To hold the blocks together in the wall by bonding to them, so that tensile and shear forces can be carried (this is often referred to as bond strength). This is particularly important so that units on the top of a wall are not easily dislodged.

In order to provide a good bond between the units and the mortar, the following guidelines should be followed:

- An appropriate mortar mix design should be selected - see table below
- The mortar should be batched accurately using some consistent form of volume measurement, e.g. 1/2 bag of cement, 1/2 bag of lime, and 18 shovels of sand for a 1:1:6 mix.
- The sand used in mortar should be clean pit sand, masonry sand or plasterer's sand. Clayey loam or sand containing organic impurities will affect the mortar strength and should not be used.
- Mortar should be discarded and not retempered, after the initial set of the cement has taken place.
- Admixtures. Caution should be exercised when using lime replacing additives such as plasticisers or workability agents. They should only be used if specified by the architect or engineer and then strictly in accordance with the manufacturers instructions.
- Detergent should never be used

Table of Mortar Mixes

Mix Proportions by Volume			Methyl Cellulose Added (see note 1)	Where Used
GP Portland Cement	Lime	Sand		
1	1/4	3	Optional	High durability - use when in contact with earth, in retaining walls, below DPC's in fences adjacent to the sea, in capping courses to fences and parapets
1	1/2	4 1/2	Optional	Structural blockwork and severe exposure - fences - external walls adjacent to sea front
1	-	4	Yes	
1	1	6	Optional	General purpose with moderate exposure
1	-	5	Yes	General purpose with moderate exposure
1	2	9	No	Fireplaces, barbecues and incinerators

Note: Methyl Cellulose water thickener is used to prevent the rapid drying out of the mortar thus improving its workability as well as increasing bond strength. It does not have the detrimental effect of some plasticisers. It is available under the trade name DYNEX or similar.

Volume of Grout Used in Filling Cores

Block Type	Volume of Concrete to Fill 1m ² Wall Area (m ³)	Volume of Concrete to Fill 100 Block (m ³)	(Approx.) No. of Blocks Filled by 1 Cubic Metre (m ³)
15.01 / 15.42	0.054	0.43	220
20.01 / 20.42	0.100	0.66	150
20.48 'H' Block	0.100	0.80	120
